Question

Make a Single Tape TM for $L = \{a^n b^n c^n \mid n \ge 0\}$.

Multi-Tape TM

 Let k ≥ 1 be an integer. A k-tape TM is a quintuple (K, ∑, δ, s, H). δ is defined as follows:

(K-H)
$$x \sum^k to K x (\sum U \{ \rightarrow, \leftarrow \})^K$$

Configuration of a k-tape TM:

$$(q, (w_1\underline{a_1}u_1, w_2\underline{a_2}u_2, \ldots, w_k\underline{a_k}u_k))$$

innovate achieve lead

Multi-Tape TM

Design a 2-tape TM for adding two binary numbers. The initial configuration of Tape-1 is $\searrow \square$ w1;w2 and that of tape-2 is $\searrow \square$. Finally, tape-2 should contain the result of w1+w2.

Proof:
